

THREE DIMENSIONAL ADVERTISING DISPLAY AND ASSOCIATED METHOD OF USE

Abstract

A three-dimensional advertising display and method of use is disclosed. The advertising display includes a structure and a plurality of sides that cooperatively form an advertising display, wherein at least one side of the plurality of sides includes an electronic panel display and at least one side of the plurality of sides includes at least one printed advertisement. A triangular structure is preferred. Solely due to cost, only a single electronic panel display is preferred, however, if the cost of the electronic panel display decreases significantly, then an electronic panel display located on each side of the advertising display would be optimal.
